# **Upper Structure** Boom

#### **Patented Design**

- Boom side plates have diamond shaped impressions for superior strength to weight ratio and 100,000 p.s.i. (689.5 MPa) steel angle chords for lateral stiffness.
- Boom telescope sections are supported by top, bottom and adjustable side wear shoes to prevent metal to metal contact.

#### Standard Boom

- 35.5' 110' (10.82 33.53 m) four-section full power boom.
  - · Basic mode (or mode 'B') is the full power, synchronized mode of telescoping all sections proportionally 110' (33.53 m).
  - The exclusive **A-max** mode (or mode 'A') extends only the inner mid-section to 60.3' (18.38 m) offering increased capacities for in-close, maximum capacity picks.
  - Mechanical Boom Angle Indicator

#### **Boom Head**

- Five 16.5" (0.42 m) root diameter nylon sheaves handle up to ten parts of wire rope.
- Quick reeve design
- Boom head designed for quick reeve of hook block.
- Rope dead end lugs provided on each side . of boom head.
- Easily removable wire rope guards
- Fly pinning alignment tool

#### **Boom Elevation**

- · Two hydraulic cylinders with holding valves and bushings in each end.
- Foot control for controlling boom elevation from  $-3^{\circ}$  to  $+78^{\circ}$ .
- Hand and foot control for controlling boom elevation - optional.

#### **Optional Auxiliary Lifting Sheave**

- Single 16.5" (0.42 m) root diameter nylon sheave with removable wire rope guard mounted on boom.
- Use with one or two parts of line.
- Does not affect erection of fly or use of main head sheaves for multiple reeving.

#### Optional

- 70-ton (63.50 mt) 5-sheave, quick reeve hook block
- 60-ton (54.43 mt) 4-sheave, guick reeve hook block
- 40-ton (36.29 mt) 4-sheave, quick reeve hook block
- 8.5-ton (7.7 mt) hook ball •
- Boom floodlight

# Fly

### Optional

- 34' (10.36 m) One piece lattice fly, stowable, offsettable to 1°, 15° or 30° with or without additional lugs to allow for second section.
- 34' 56' (10.36 17.07 m) Two piece (bifold) lattice fly, stowable, offsettable to 1°, 15° or 30°. ness Campbell 🚬

# Cab and Controls

### **Environmental Cab**

- · Isolated from sound and vibration by a neoprene seal.
- Six–way adjustable operator's seat with retractable seat belt.
- Four-way adjustable tilting-telescoping and locking steering wheel.
- All windows are tinted and tempered safety glass.
- Slide by door opens to 3' (0.91 m) width.
- Sliding rear and right side windows and swing up roof windows for maximum visibility and ventilation.
- · Engine dependent warm-water heater with defroster.

· Warning horn

· Circulating fan

Travel lights

· Cup holder

- Dash mounted outrigger controls · Hand throttle
- Sight level bubble •
  - Audible swing alarm
- Backup alarm
- Sun screen
- Electric windshield wiper Mirrors
- Windshield washer Fire extinguisher
- • Top hatch window wiper

#### Optional

- Amber strobe light and rotating beacon
- Emergency steering system
- Rear steer indicator •
- Air conditioning
- Cab mounted spotlight

#### Controls

- Hydraulic control levers for:
- Main winch Boom hoist
- Boom telescope Swing •
- Drum rotation Indicators
- Optional auxiliary winch controls

#### Foot controls for:

- Swing brake
- Foot throttle
- Boom hoist foot control optional

#### Cab Instrumentation

- Dash mounted gauges for:
- Hydraulic oil temperature Fuel
- Voltmeter . Convertor temperature Tachometer
- Oil pressure
- Audio / visual warning system
- Water temperature

## Rated Capacity Limiter

Microguard 434 Graphic audio-visual warning system built into dash with antitwo block and function limiters.

- Machine configuration
- Boom length
- Head height
- Allowed load
- % of allowed load

- Presettable alarms include:
- · Maximum and minimum boom angles
- Maximum tip height
- Maximum boom length
- Swing left/right positions. .
- Operator defined area alarm is standard.
- Anti-two block weight designed for quick reeve of hookblock.

#### Optional

- Internal RCL light bar: Visually informs operator when crane is approaching maximum load capacity with a series of lights; green, yellow and red.
- · External RCL light bar: Visually informs ground crew when crane is approaching maximum load capacity kickouts and presettable alarms with a series of three lights; green, yellow and red.

# Swing

- Bi–directional hydraulic swing motor mounted to a planetary reducer for 360° continuous smooth swing at 2.4 r.p.m.
- Swing brake 360°, foot operated, hydraulic applied disc brake mounted on the speed reducer.
- Counterweight Pinned to the upper structure of frame. 12,900 lbs. (5 851 kg).
- 360° Swing Lock meets New York City requirements.

replacement.

Three-section gear-type pump

#### **Control Valves:**

• Six separate pilot operated control valves allow simultaneous operation of all crane functions.

# Load Hoist System

#### Standard

- 2M rear winch with grooved lagging.
- Two-speed motor and automatic brake.
- Power up/down mode of operation.
  - Controls for future addition of auxiliary winch.
  - Bi-directional gear-type hydraulic motor, driven through a planetary reduction unit for positive operator control under all load conditions.
- Asynchronous parallel double crossover grooved drums minimize rope harmonic motion.

#### Line Pulls and Speeds

- Maximum line pull 16,266 lbs. (7 378 kg) and maximum line speed of 454 f.p.m. (138 m/min) on standard 16" (0.41 m) root diameter grooved drum
- Rotation resistant rope

#### Optional

 2M front winch with two-speed motor and automatic brake, power up/down mode of operation.

# Carrier

### Туре

- 10' 10.5" (3.31 m) wide, 151" (3.84 m) wheelbase.
- 4 x 4 x 4 (4–wheel steer, 4–wheel drive) For rough terrain with limited turning area.

#### Frame

- 100,000 p.s.i. (689.5 MPa) steel, double walled construction.
- Integral 100,000 p.s.i. (689.5 MPa) steel outrigger boxes.

#### **Standard Carrier Equipment**

- Two front and rear carrier steps
- Non-slip safety strips on carrier deck
- Deep front storage
- Fenders
- Pontoon storage
- Full lighting package
- Lifting lugs
- Front towing shackles

#### Optional

- Front and rear mounted pintle hook
- · Front tow winch

## Engine

| Engine                | Caterpillar 3126B 7.2L |
|-----------------------|------------------------|
| Cylinders – cycle     | 6-4                    |
| Bore                  | 4.33 in. (110 mm)      |
| Stroke                | 5.00 in. (127 mm)      |
| Displacement          | 442 cu. in. (7.2 L)    |
| Maximum brake hp      | 225 @ 2,200 rpm        |
| Peak torque (ft. lb.) | 646 @ 1,500 rpm        |
| Electric system       | 12 volt                |
| Starting system       | 12 volt                |
| Fuel capacity         | 95 gallons (359.61 l)  |
| Alternator            | 130 amps               |
| Crankcase capacity    | 30 qts. (28 l)         |
| (total system)        |                        |
|                       |                        |

#### Water/fuel separator on engine

• Ether injection package – optional

## Transmission

- Spicer off-highway three-speed, two range power shift transmission.
- Six speeds forward and two reverse
  Front axle disconnect for two or four–
- wheel drive.

### Axles

- Front and Rear Heavy duty planetary drive/steer type.
- Front axle disconnect

# Suspension

#### Front Axle

• Rigid mounted to frame.

#### Rear Axle

- Pin mounted on bronze bushings.
- Automatic hydraulic rear axle oscillation lock–out cylinders engage when upper structure rotates past 2.5° of centerline.

## Steering

- Hydraulic two–wheel, four–wheel and "crab" steering.
- Modes selected by toggle switch on dash.
- All modes fully controlled by steering wheel.

## Tires

#### Front and Rear

 Standard 29.5 x 25 (28–PR) Earthmover type

#### Optional

- 29.5R25 XHA 1 star radials
- Spare tires and rims.

## Brakes

#### Service

 Hydraulic disc-type brakes at each wheel end.

#### Parking/Emergency

 Disc-type spring applied, hydraulic release, cab controlled, mounted to front axle.

## Outriggers

- Three position operation capability.
- Four hydraulic, telescoping beam and jack outriggers.
- Vertical jack cylinders equipped with integral holding valve.
- Beams extend to 22' 0" (6.71 m) centerline\_to\_centerline and retract to within 10' 10.5" (3.31 m) overall width.
- Equipped with stowable, lightweight 23.5" x 27.25" (59.7 x 69.2 cm) hexagonal steel pontoons.
- Controls and sight level bubble located in upper structure cab.

# Confined Area Lifting Capacities (CALC<sup>™</sup>) System

- Three operational outrigger configurations are available:
  - Full extension -24' 0" (7.32 m)
  - Intermediate position 17' 6" (5.33 m).
  - Full retraction -11' 0.75" (3.37 m).
- For confined area operation, rated lifting capacities are provided for the intermediate and fully retracted outrigger positions.
- When the outrigger position levers (located on the outrigger beams) are engaged, the operator can set the crane in the intermediate or full retraction outrigger position without having to leave the cab.

#### Optional

• Outrigger cover package

## Travel Speeds and Gradability

| Tires   | 29.5 x 25                  |  |  |  |  |  |  |
|---|----------------------------|--|--|--|--|--|--|
| Maximum Speed   | 19.8<br>(31.9 km/h)        |  |  |  |  |  |  |
| Gradability at 70% convertor effiecinecy  | 140.7%                     |  |  |  |  |  |  |
| Maximum Tractive Effort at 70% convertor efficiency   | 76,507 lbs.<br>(34 703 kg) |  |  |  |  |  |  |
| Gradability at 1.0 mph<br>(1.6 km/hr)   | 62.5%                      |  |  |  |  |  |  |
| Maximum Tractive Effort at 1.0 mph. (1.61 km/hr)  | 50,376 lbs.<br>(22 850 kg) |  |  |  |  |  |  |
| Machine operating angle must not exceed 35° (77% grade). Numbers reflect main hydraulic pump engaged. |                            |  |  |  |  |  |  |

# Lifting Capacities

Telescopic Boom Rough Terrain Crane

# **RTC-8060** 60-ton (54.43 metric ton)

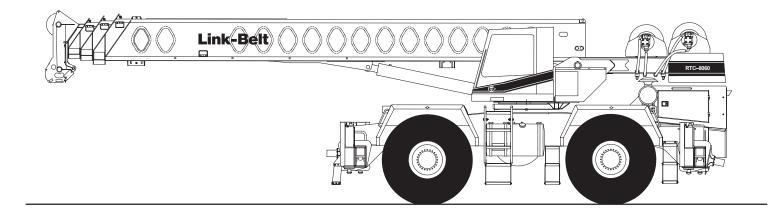

Boom and fly capacities for this machine are listed by the following sections:

## **Fully Extended Outriggers**

- Working Range Diagram (12,900 lbs. Counterweight)
- 35.5' 60.3' (10.82 18.38 m) Main Boom Capacities, A-max Mode
- 35.5' 110' (10.82 33.53 m) Main Boom Capacities, Basic Mode "B"
- 34' (10.36 m) Offset Fly Capacities, Basic Mode "B"
- 34' 56' (10.36 17.07 m) Two-piece Offset Fly Capacities, Basic Mode "B"

## On Tires

- Working Range Diagram (12,900 lbs. Counterweight)
- 35.5' 60.3' (10.82 18.38 m) Main Boom Capacities, **A-max** Mode
- 35.5' 110' (10.82 33.53 m) Main Boom Capacities, Basic Mode "B"

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

# WARNING

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND RATED LIFTING CAPACITIES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

### **OPERATING INSTRUCTIONS**

#### GENERAL:

- 1. Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
- 2. Construction equipment can be dangerous if improperly 4. operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor
- 3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
- 4. The maximum allowable lifting capacities are based on crane 7. standing level on firm supporting surface.

#### SET UP:

- 1. The crane shall be leveled on a firm supporting surface. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger pontoons or tires to spread the load to a larger bearing surface.
- 2. When making lifts on outriggers, all tires must be free of supporting surface. All outrigger beams must be extended to the same length; fully retracted, intermediate, or fully extended.
- 3. When making lifts on tires, they must be inflated to the recommended pressure. (See Operation note 19 and Tire Inflation.)
- 4. When operating on tires, do not exceed 76 degree maximum boom angle. Loss of backward stability will occur causing a tipping condition.
- 5. For required parts of line, see Wire Rope Capacity and Winch Performance.

#### **OPERATION:**

- 1. Rated lifting capacities at rated radius shall not be exceeded. Do 12. Power sections of boom must be extended in accordance with not tip the crane to determine allowable loads. For concrete bucket operation, weight of bucket and load shall not exceed 80% of rated lifting capacities. For clamshell bucket operation, 13. The least stable rated working area on outriggers is over the side. weight of bucket and bucket contents is restricted to a maximum 14. Rated lifting capacities are based on correct reeving. Deduction weight of 7000 pounds or 80% of rated lifting capacity, whichever is less. For magnet operation, weight of magnet and load is restricted to a maximum weight of 7000 pounds or 80% of rated lifting capacity, whichever is less. For clamshell and magnet operation, maximum boom length is restricted to 55 feet and the boom angle is restricted to a minimum of 35 degrees. Lifts with 15. The loaded boom angle combined with the boom length give only either fly erected or boom in "Mode A" are prohibited for both clam and magnet operation.
- 2. The crane capacities shown on fully extended, or intermediate extended outriggers do not exceed 85% of the tipping loads. The crane capacities shown on fully retracted outriggers or tires do not exceed 75% of the tipping loads as determined by SAE crane stability test code J-765A.

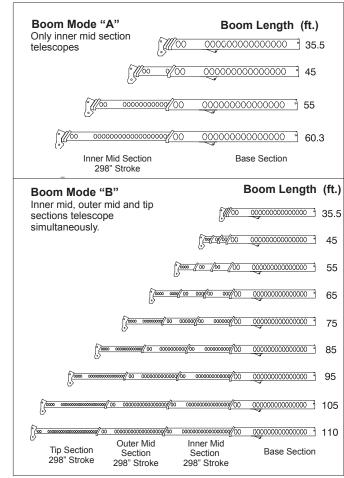

- 3. The crane capacities in the shaded areas above the bold lines, are based on structural strength or hydraulic limitations. The crane capacities below the bold lines are based on stability ratings. Some capacities are limited by a maximum obtainable 78° boom angle.
- Rated lifting capacities include the weight of hook block, slings, bucket, magnet, and auxiliary lifting devices. Their weights must be subtracted from the listed rated capacity to obtain the net load which can be lifted. Also, see Capacity Deductions For Auxiliary Load Handling Equipment.
- 5. Rated lifting capacities are based on freely suspended loads. No attempt shall be made to move a load horizontally on the ground in any direction.
- Rated lifting capacities are for lift crane service only. 6.
  - Do not operate at any radii or boom lengths (minimum or maximum) where capacities are not listed. At these positions, the crane can overturn without any load on the hook or cause boom failure.
- 8. The maximum loads which can be telescoped are not definable because of variation in loadings and crane maintenance, but it is permissible to attempt retraction and extension within the limits of the applicable load rating chart.
- 9. For main boom capacities when either boom length or radius or both are between values listed, proceed as follows:
  - a. For boom lengths not listed, use rating for next longer boom length or next shorter boom length, whichever is smaller.
  - b. For load radii not listed, use rating for next larger radius.
- 10. The user shall operate at reduced ratings to allow for adverse job conditions, such as: soft or uneven ground, out of level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, hazardous conditions, experience of personnel, traveling with loads, electrical wires, etc. Side load on boom or fly is extremely dangerous.
- 11. When making lifts with auxiliary head machinery, the effective length of the boom increases by 2 feet.
- boom mode "A" or "B". In boom mode "B" all power sections must be extended or retracted equally.
- must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity) is considered excessive and must be accounted for when making lifts. Use working range diagram to estimate the extra feet of rope then deduct 1 lb for each extra foot of wire rope before attempting to lift a load.
- an approximation of the operating radius. The boom angle, before loading, should be greater to account for deflection. For main boom capacities, the loaded boom angle is for reference only. For fly capacities, the load radius is for reference only.
