

BOOM TRUCK 36 TONS

NATIONAL SERIES 1500

BOOM LENGTHS:
31FT TO 127FT

JIB LENGTHS:
31FT

JIB OFFSETS:
0

NOTES:

features

Why Buy a National Crane Series 1500?

- 36 USt (32.66 t) maximum capacity
- 166 ft (50.60 m) maximum vertical reach*
- 135 ft (41.15 m) maximum vertical hydraulic reach*
- Load Moment Indicator system (LMI)
- Proportional boom extension
- High performance planetary winch
- Vickers PVH 131 pressure compensated, load sensing, axial piston, variable volume pump direct mounts to PTO
- * Maximum vertical reach is ground-level to boom tip height at maximum extension and angle with outriggers/stabilizers fully extended.
- 36 USt (32.66 t) Rating – The 1500 provides a 36 USt (32.66t) capacity at a 6 ft (1.82 m) radius, a 9% increase over the Series 1400.
- 127 ft (38.71 m) Five-section Boom – The long boom allows the operator to perform more lifts without the use of a jib, reducing setup time and improving efficiency.
- Overload Protection – All National Crane boom trucks are equipped with overload protection:
 - Load Moment Indicator (LMI) standard on all Series 1500 machines.
 - LMI display and CPU are weatherproof.
 - LCD display is visible in full or low light.
 - All crane load lifting values are displayed simultaneously.
- Stronger Torsion Box – The stronger standard torsion box improves rigidity, reduces truck frame flex and reduces the need for counterweight.
- Speedy-reeve Boom Tip and Sheave Blocks – These standard features simplify rigging changes by decreasing the time needed to change line reeving.
- Pre-painted Components – Painting crane components before assembly reduces the possibility of rust, improves serviceability and enhances the appearance of the machine.
- Easy Glide Boom Wear Pads – Reduce the conditions that cause boom chatter and vibration. The net result is smoother crane operation.
- Deluxe Operator's Cab – Rigid galvanized steel structure, well insulated, with ample safety glass for operator visibility and comfort. Multi-position seat with arm rest controls, ventilation fans, diesel heater, wipers. Optional air-conditioning is available.
- Outrigger – Outrigger span of 24.7 ft (7.53 m) when fully extended; 17.5 ft (5.33 m) at mid-span.
 - Ground-level outrigger controls on both sides.
 - In-cab outrigger controls for all functions.
 - Front bumper stabilizer for stable base over front.
- Improved Serviceability –
 - Boom sections are supported by one hydraulic extend cylinder, minimizing maintenance.
 - Bearings on the boom extend and retract cables can be greased through access holes in the boom side plates.
 - Pre-paint reduces rust.
- Electronic versions of manuals available through Manitowoc Crane Care.
- New State-of-the-art Control Valve – Provides smoother operation. The new load-sensing, pressure-compensated design greatly enhances function meterability, eliminates parts, reduces repair costs and improves the machine's serviceability.
- National Crane Is the Market Leader – National Crane is number one in the production of commercial truck-mounted boom trucks, with more than 35,000 units sold. National Crane has many programs and people directly and indirectly involved to provide our customers with reliable products.
- National Crane has the boom truck industry's leading test program. Every structural part of the crane is cycle tested, some up to 60,000 cycles at full capacity. In addition to cycle testing, each model is subjected to state-of-the-art strain gauge testing that measures metal deformation as small as one one-millionth of an inch. The net result is that weak areas are caught in test, not on job sites where costly downtime occurs.
- Parts are available for all National Crane machines for the life of the crane.
- National Crane has a formalized quality program and is ISO 9001 approved.

WWW.NESSCAMPBELL.COM

mounting configurations

The configurations are based on the Series 1500 with an 85% stability factor. The complete unit must be installed in accordance with factory requirements and a test performed to determine actual stability and counterweight requirements since individual truck chassis vary.

Configuration 1 – 1500

Working area	360°
Gross Axle Weight Rating Front	20,000 lb (9072 kg)*
Gross Axle Weight Rating Rear	34,000 lb (15 422 kg)*
Gross Vehicle Weight Rating	54,000 lb (24 494 kg)*
Wheelbase	258 in (655 cm)
Cab to Axle/trunnion (CA/CT)	180 in (457 cm)
After Frame (AF)	92 in (2.44 m) minimum
Frame Section Modulus (SM), front axle to end of afterframe, w/110,000 PSI (758 MPa)	30 in³ (492 cm³)
Stability Weight, Front	9,700 lb (4410 kg) minimum**
Stability Weight, Rear	8,500 lb (3865 kg) minimum**
Estimated Average Final Weight	51,880 lb (23 587 kg)***

The diagram shows the 360° working area achieved with the front stabilizer (standard on the Series 1500). The front stabilizer is required when extending the boom and lifting loads over the front of the truck. A minimum of 10-in³ (104 cm³) section modulus at 110,000 psi (758 MPa) is required from the rear of the front spring hanger forward to the front stabilizer. Integral front frame extension requested.

*Required to mount basic crane with 30 ft (9.45 m) jib option. Additional options or heavier base chassis weights will require additional axles or a GVWR in excess of 54,000 lb (24 494 kg); in some states, special permits for overload are required.

**Estimated axle scale weights prior to installation of crane, stabilizers and subbase for 85% stability.

***Includes basic crane without jib, 100 gal (379 L) fuel tank and two workers in cab.

Note: Chassis will require extended front frame rails for SFO addition.

MINIMUM TRUCK REQUIREMENTS

Many factors must be considered in the selection of proper truck for a 1500 series crane. Items which must be considered are:

1. **Axle Rating.** Axle ratings are determined by the axles, tires, rims, springs, brakes, steering and frame strength of the truck. If any one of these components is below the required rating, the gross axle rating is reduced to its weakest component value.
2. **Wheelbase (WB), Cab-to-Trunnion (CT) and Bare Chassis Weight.** The wheelbase, CT and chassis weights shown are required so the basic 1500 can be legally driven in most states and meet stability requirements. The dimensions given assume the sub-base is installed properly behind the truck cab. If exhaust stacks, transmission protrusions, etc., do not allow a close installation to the cab, the WB and CT dimensions must be increased. Refer to the Mounting Configuration pages for additional information.
3. **Truck Frame.** Try to select a truck frame that will minimize or eliminate frame reinforcement or extension of the after frame (AF). Many frames are available that have the necessary

after frame (AF) section modulus (S.M.) and resistance to bending moment (RBM) so that reinforcing is not required. The front hydraulic jack is used for a 360° working range around the truck. The frame under the cab through the front suspension must have the minimum S.M. and RBM because reinforcing through the front suspension is often difficult because of engine, radiator mounts and steering mechanics. See "Truck Requirements" and "Frame Strength" information above for the necessary section modulus and resistance to bending moment values.

4. **Additional Equipment.** In addition to the axle ratings, wheelbase, cab-to-axle requirements and frame, it is recommended that the truck is equipped with electronic engine control, increased cooling and a transmission with a PTO opening available with an extra heavy duty PTO. A conventional cab truck should be used for standard crane mounts.
5. **Neutral Start Switch.** The chassis must be equipped with a switch that prevents operation of the engine starter when the transmission is in gear.

specifications

Boom and Jib Combinations Data

Available in three basic models: 1579 four-section, 15103 four-section and 15127 five-section.

Model 1579 – Equipped with a 31-79 ft (9.45-24.08 m) four-section boom. Maximum tip height is 87 ft (25.52 m).

31 - 79 ft (9.45-24.08 m) four-section boom

Model 15103 – Equipped with a 31-103 ft (9.45-31.40 m) four-section boom. This model can be equipped with a 31 ft (9.45 m) single section side-stowing jib providing a maximum tip height of 142 ft (43.29 m), or a 31-55 ft (9.45-16.76 m) side-stowing folding jib, providing a vertical reach of 166 ft (50.60 m). Contact factory for information on angling jib.

31 - 103 ft (9.45-31.40 m) four-section hydraulic boom

31 - 103 ft (9.45-31.40 m) four-section hydraulic boom 15FJ31 31 ft (9.45 m) single-section jib

31 - 103 ft (9.45-31.40 m) four-section hydraulic boom 15FJ55M 31-55 ft (9.45-16.76 m) single-section jib

Model 15127 – Equipped with a 31-127 ft (9.45-38.72 m) five-section hydraulic boom. This model can be equipped with a 31 ft (9.45 m) single-section side-stowing jib. Maximum tip height w/31 ft (9.45 m) jib is 166 ft (50.60 m).

31 - 127 ft (9.45-38.72 m) five-section hydraulic boom

31 - 127 ft (9.45-38.72 m) five-section hydraulic boom 15FJ31 31 ft (9.45 m) single-section manual jib

Note: maximum tip height is measured with outriggers/stabilizers fully extended.

1500 Winch Data

- All winch pulls and speeds are shown on the fifth layer.
- Winch line pulls would increase on the first, second, third and fourth layers.
- Winch line speed would decrease on the first, second, third and fourth layers.
- Winch line pulls may be limited by the winch capacity or the ANSI 5 to 1 cable safety factor.

Winch	Cable Supplied	Average Breaking Strength	1 Part Line	2 Part Line	3 Part Line	4 Part Line	5 Part Line	6 Part Line	7 Part Line	8 Part Line

Load Rating Chart: Series 1579 (24.08 m) Boom/Fullspan Outrigger 24.66 ft (7.51m)

National Crane will send you a chart on request – or you may secure needed load rating information through your nearest National Crane dealer.

CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 10 ft (3m) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii.
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.

Load Rating Chart: Series 15127 (38.71 m) Boom with 31 ft (9.45 m) Jib/Fullspan Outrigger 24.66 ft (7.51 m)

National Crane will send you a chart on request – or you may secure needed load rating information through your nearest National Crane dealer.

CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 10 ft (3m) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii.
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.
